

Shadow AI Audit: evidence pack

Scope: Example Industries (sample data). AI tools observed in the supplied network export, matched against our live register of 20,399 classified AI tool domains.

Export format: csv. Lines read: 4,400. Distinct hostnames: 163. Generated: 2026-09-19 09:20.

Policy profile applied: General business. Under this profile 5 of the 37 tools found would be blocked, 28 allowed only with controls (enterprise tier, SSO, no-training terms, logging) and 4 allowed as is. The profile is a starting point to review before deployment.

Findings at a glance

Measure	Count	Meaning
AI-native tools	29	Products whose core function is AI (assistants, generators, agents).
AI-enabled platforms	8	Sanctioned-looking SaaS that now carries AI features.
High-risk tools	5	Highest combined risk rating in the register.
Medium-risk tools	21	Elevated risk rating; allow only with controls.
High data-sovereignty exposure	2	Data handled under jurisdictions flagged high.
Abusive-purpose tools	2	Deepfake, nudify, NSFW or uncensored generation.
Trains on user data by default	5	Consumer tier trains unless the vendor states otherwise.
Trains unless opted out	10	A switch exists; past prompts may already be used.
Training terms not stated	16	Vendor terms do not answer the question.
Endpoints or users seen	14	Distinct sources that reached at least one AI tool.

Tools by category

Category	Tools
Text & Language	8
Image & Visual	6
Code & Development	5
Agents & Automation	4
Search, Knowledge & Docs	3
Audio, Voice & Music	3
Video & Animation	3
Productivity & Collab	2

Category	Tools
Models & Infrastructure	1
Data & Analytics	1
Education & Learning	1

Control evidence statement

This report is generated from the organisation's own DNS, proxy or firewall export, matched against our register of classified AI tool domains. Each matched domain carries its category, risk rating, data-sovereignty flag, abusive-purpose flag and the vendor's stated position on training with user data, with the date the vendor terms were last checked. It can be filed as the AI-usage control inventory for an audit period together with the enforcement configuration derived from it.

The uploaded export was processed in memory and discarded. Only this report is retained, for 90 days, in the account that produced it.

Run this on your own logs

The free preview runs on any export in minutes and needs only an email address. The full Audit Report is a one-time purchase from \$99, with no subscription.
