SEPTEMBER 2026

Your AI protection this month

Your firewall blocks a list of AI tools that could put company data at risk. We keep the list current every day; this page shows what changed.

✓ **Protection active.** Your firewall downloaded the current list on 27 of 27 days this month (27 downloads), most recently on 27 September 2026, 06:00 UTC. Every download brings in the tools added that day.

transcript.you	Audio, Voice & Music	High risk	25 Sep

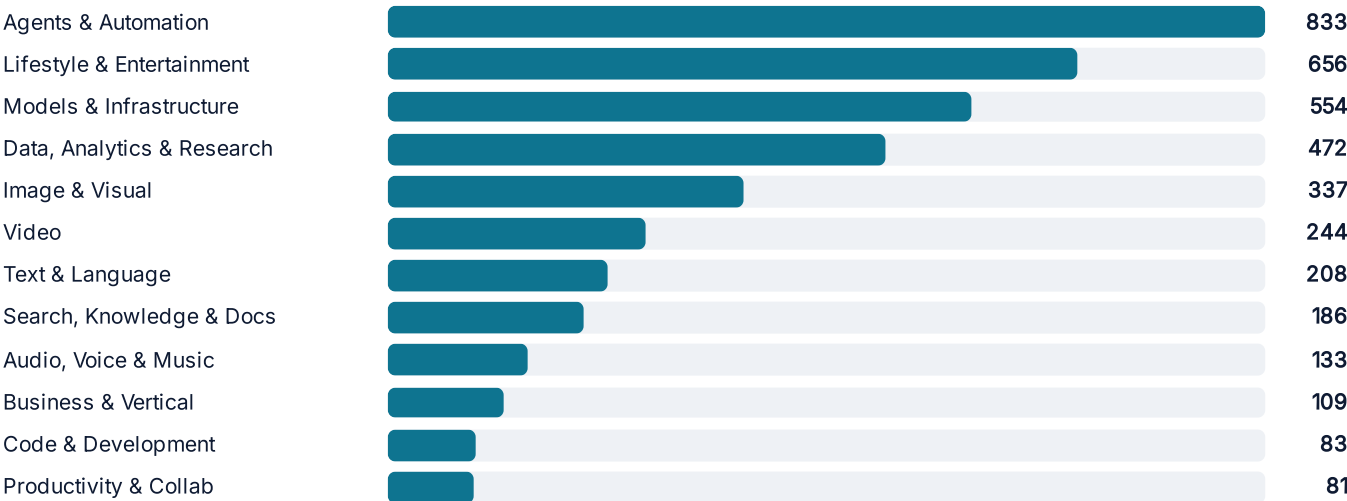

Showing the 10 most recent high-risk additions. 872 more were added this month; your IT provider has the full list.

YOUR BLOCK LIST

What is blocked, and your own rules

Your list follows the MSP default (managed clients) policy, adjusted with the exceptions you agreed with your IT provider.

Blocked AI tools by type

Always allowed for you

chatgpt.com, claude.ai, grammarly.com

Blocked on your request

remove.bg

How it works

Every AI tool in our database is checked for risk, where it keeps data, and whether it learns from what people type into it. Your policy decides which of them your firewall blocks. Tools that are only safe in their paid business version (such as the free ChatGPT) stay open in normal mode; ask your IT provider about strict mode if your team handles sensitive data.

This summary is built from your block list settings and your firewall's downloads. It does not use your network logs, so it cannot show which websites people visited.
